PROFESSIONAL PROFILE AND EXPERTISE

He joined the National Research Council of Italy as a permanent researcher in 2009, after a Postdoc position at "Istituto di Struttura della Materia" of the National Research Council (ISM-CNR) and a research grant for Ph.D. at University of Rome La Sapienza (Italy). Currently, he has focused his scientific research interests to the study of ultrafast dynamics in plasmonic, semiconductor and energy-related materials, by means of advanced optical femtosecond pump-probe spectroscopies (Fast Transient Absorption Spectroscopy). In the recent past, his research activity has been mainly devoted to study molecules and clusters through laser and synchrotron radiation, acquiring wide competences in the field of photoelectron and photoion spectroscopies. His Ph.D. was devoted to the study of molecular and chiral recognition processes acting in diastereomeric clusters. During the post-doc period his research activity was principally devoted in Circular Dichroism Photoelectron Spectroscopy measurements of chiral molecules with circular polarized synchrotron radiation. He spent his post-doc period as beamline scientist at CiPo beamline of Elettra Synchrotron (Trieste, Italy), having the opportunity to enlarge his research competences also in the spectroscopies of self-assembled surfaces. Starting from 2015, he is part of the group that coordinates the scientific activity of the EuroFEL Support Laboratory.
